

Let's Work Together

The AI-Powered Professional **Execution Platform**

Building the missing execution layer between education and employment.

Education ends where employment begins

Graduates leave campus with knowledge, not with proof they can execute — and companies are left to close the gap at their own expense.

Knowledge without execution

Curricula teach concepts and syntax, but rarely the judgment required to ship real work.

Costly, slow onboarding

Employers absorb three to six months of ramp time per graduate hire before real output begins.

Internships can't scale

Structured, mentored internships remain scarce relative to the volume of graduating talent.

Execution-readiness is invisible

Recruiters can't distinguish candidates who've been taught from those who can actually deliver.

The ground has shifted beneath education

Three forces are converging to make execution — not credentials — the new currency of employability.

AI agents are becoming coworkers

Autonomous agents now plan, review and ship work alongside humans — not just assist them.

Hiring competition is intensifying

Record graduate volumes are chasing a shrinking pool of entry-level roles every hiring cycle.

Skills alone no longer signal capability

Certificates and course completions have become noisy, easily-gamed proxies for ability.

Employers are demanding proof

Companies increasingly hire on demonstrated execution history over self-reported skill claims.

OUR SOLUTION

LWT is a System — not a course

Let's Work Together drops learners inside a fully simulated, AI-run company where they hold a real role, ship real work, and are evaluated the way a real employer would.

- A persistent AI-powered virtual workplace, available on demand
- Real workflows — GitHub, pull requests, sprints, deployments
- A verified execution portfolio recruiters can trust

STUDENTS WORK ALONGSIDE AI COWORKERS

HOW IT WORKS

From interview to recruiter, inside one execution loop

EXECUTION LOOP — REPEATS EVERY SPRINT

An execution engine, not a content library

Every layer of LWT is purpose-built to generate, run, evaluate and certify real project work at scale.

A large, underserved execution gap

EXECUTION-READINESS SPEND, INDIA (ILLUSTRATIVE, \$B)

Multiple durable revenue lines, one execution graph

Institution Licensing

Annual platform licenses sold to colleges, universities and bootcamps.

Per-Student Licensing

Usage-based pricing tied to active learner seats within an institution.

Student Premium

Direct-to-learner subscription unlocking advanced tracks and mentorship.

Recruiter Access

Paid access to verified execution portfolios and talent search tools.

Enterprise Training

Corporate upskilling programs for workforce onboarding at scale.

AI Credits

Consumable credits for extended AI coworker sessions and evaluations.

Future API Licensing

Execution-engine APIs licensed to partner platforms and employers.

Everyone teaches or tracks work. Nobody simulates the company.

	Teaches skills	Tracks work	AI coworkers	Simulates a full company	Verified execution portfolio

✓ full · – partial · ✕ absent

Moats that compound with every learner

Execution Intelligence

Proprietary models trained to evaluate real project execution, not quizzes.

AI Workplace

A full simulated company — not a single tool or isolated exercise.

Execution Dataset

A growing, proprietary dataset of real student execution behaviour.

Evaluation Engine

Consistent, defensible scoring of quality, velocity and collaboration.

GitHub Integration

Native, real-workflow integration recruiters already trust.

Professional Portfolio

A verified, shareable execution record — not a certificate PDF.

Future IP

Expanding library of role-specific simulations and evaluation models.

Scalable AI Infrastructure

Built to serve millions of concurrent learner sessions cost-efficiently.

From campus pilots to enterprise workforce accounts

1

Pilot Colleges

Land flagship engineering colleges as founding institutional partners.

2

Campus Ambassadors

Student-led ambassador network drives grassroots adoption and referrals.

3

Communities

Engage coding and career communities where target learners already gather.

4

Partnerships

Placement cells, bootcamps and training providers as distribution channels.

5

Recruiters

Onboard recruiters as demand-side users of verified execution portfolios.

6

Enterprise

Expand into corporate workforce upskilling and onboarding accounts.

Future Advisors

Building an advisory bench across AI, higher-education and enterprise talent.

Raising 6 lakhs to reach 1,000 students & product-market fit

₹ 6 Lakhs

SEED ROUND · 18-MONTH RUNWAY

- Ship MVP and onboard first pilot colleges
- Cross 1,000 active students on the platform
- Launch recruiter-facing portfolio marketplace
- Close 5+ institutional licensing partnerships
